Profile

Experienced web software engineer adept in bringing forth expertise in design, development, testing, and maintenance of various software systems using latest technologies.

Education

bacc.ing.comp, Algebra University College for Computer Engineering, Zagreb, Zagreb

January 2012 — January 2015

During the studying, I participated in various competitions such as Erste Finnovation Hackathon where I, along with the other colleagues, developed certain functionality within existing applications for e-banking. This functionality allows users to make purchases by scanning a QR code. I have held various Microsoft LightSwitch meetings related to Microsoft LightSwitch technology where a meeting was organized for all the teachers of informatics. I have also passed the following certificates during the studying:

- ECDL
- RiskyBusiness
- Windows Operating System Fundamentals
- HTML5 Application Development Fundamentals.

Employment History

Frontend Engineer, Productive Inc, USA

2022 — 2024

B2B contractor

Working in SaaS company where I was responsible for the design, delivery and maintenance of the text editing module over which I had ownership. In addition to daily meetings with the team as well as the development itself, my responsibility was onboarding and mentoring new team members. I also did improvements together with test automation and maintenance of realtime communication eco-systems and that was the most challenging tasks in my career. As technical advances in this position, I would highlight the boilerplating of an e2e test environment using the latest technologies and practices.

Frontend Engineer & Team Lead, Uniqcast, Croatia

2017 – 2022

B2B contractor

Working in SaaS company where I was responsible for design, development and delivery web client applications (administration and IPTV interface) developed with Angular (5+). In this company I progressed from junior to mid / senior frontend engineer and I successfully designed, published and maintained 3 client applications. Of these, two are administrative interfaces and one is an application for viewing / streaming IPTV content.

Full Stack Engineer, Y7K, Switzerland

2017 – 2018

B2B contractor

Swiss digital agency where I was specialized in the maintenance and enhancement of PHP-based projects, including WordPress and Craft CMS platforms. Played a pivotal role in the development of new features while also addressing maintenance tasks and bug fixing. Demonstrated proficiency in project upkeep and troubleshooting, showcasing a keen attention to detail and commitment to ensuring project stability and functionality.

Frontend Engineer, Q, Zagreb

2015 – 2017

B2B contractor

Croatian digital agency where I was involved in both the frontend and backend WordPress development. Part of a team on large projects for Facebook and Coca Cola, but also capable of delivering the whole project himself. Most of the websites were created in the Wordpress CMS platform. During these projects, I learned how to create custom themes and plugins from scratch that were adapted to the client's needs. One of the interesting integrations was connecting the Angular SPA application with the Wordpress platform.

Frontend Engineer, Exillio j.d.o.o, Zagreb

2012 – 2013

As a junior developer I started with a simple static website development. During the work I learned the basics concepts of the frontend web projects using frontend technologies HTML, CSS, Javascript and LAMP stack. I also learned how to have communication between the client and the server using REST / SOAP and WebSocket. I began studying PHP scripting language which I really like and headed in that direction as a web application developer.

Full Stack Engineer, Smart Source, Zagreb

February 2015

After graduating from college I opened my own company (Smart Source) and worked on various projects with many customers B2B contracts (mostly in Europe).

Custom web site and application development.

Worked on multiple projects using various technologies – the highlighted ones:

- custom websites and web shop solutions using Wordpress + WooCommerce, Magento and Craft CMS platforms.

- made several proof of concept projects using the Ionic framework.
- an application that displays IoT home system data using Ionic
- personal application for booking accommodation using Angular and NodeJS.
- simpleBilling and College Manager - applications built using PHP, MySQL, JavaScript, jQuery and Ajax. SimpleBilling application offers business owners a simple way to generate/convert invoices to bills, automatic PDF creation and send-to-mail option. College Manager application offers an easy management of students, their classes, inscription lists and much more.
- in cooperation with another company, a mobile and web application (crypto exchange) was created, which unfortunately was not sold to the agreed client using Ionic and NodeJS.
- familiar with CI / CD environments such as Github Actions, Semaphore and Jenkins.

Courses

ECDL, University College for Applied Computer Engineering, Zagreb, Croatia

RiskyBusiness, Faculty of electrical engineering and computing, Zagreb, Croatia

Windows Operating System Fundamentals, Technical park, Varaždin, Croatia

HTML5 Application Development Fundamentals, Technical park, Varaždin, Croatia

Angular 2+, Udemy

2017

Flutter, Udemy

2019

React, Udemy

January 2024 — January 2024

Internships

Full Stack Engineer, IDE 3 d.o.o, Zagreb, Croatia

2014 — 2015

Web application developer in Croatian IT company named IDE 3.

Successfully led the developers and web designer team and delivered 3 projects - two web sites and a survey application for Mega Productions Ltd. The application is being used by a local radio station “Antena Zagreb” which was developed as a responsive web application in a PHP scripting language.
